It sets out outcomes for people with or at risk of cardiovascular disease (CVD) in line with the NHS and Public Health Outcomes Frameworks. It identifies 10 main actions to improve outcomes.

Improving cardiovascular disease outcomes: strategy - gov.uk

Overview This guideline covers the main risk factors linked with cardiovascular disease: poor diet, physical inactivity, smoking and excessive alcohol consumption.

Cardiovascular disease prevention - NICE

Conclusions Greater adherence to the MD was associated with lower risk of stroke in a UK white population. For the first time in the literature, we also investigated the associations between the MD score in those at both low and high risk of cardiovascular disease.

Mediterranean Diet Reduces Risk of Incident Stroke in a ...

Risk assessment is a critical step in the current approach to primary prevention of atherosclerotic cardiovascular disease. Knowledge of the 10-year risk for atherosclerotic cardiovascular disease identifies patients in higher-risk groups who are likely to have greater net benefit and lower number needed to treat for both statins and ...

Use of Risk Assessment Tools to Guide Decision-Making in ...

A review of statins for primary prevention of cardiovascular disease could alter guidance for those with a 10 year risk of less than 10%. John Abramson and colleagues argue that statins have no overall health benefit in this population and that prescribing guidelines should not be broadened

Should people at low risk of cardiovascular disease take a ...

Most medical, scientific, heart-health, governmental, and professional authorities agree that saturated fat is a significant risk factor for cardiovascular disease, including the World Health Organization, the Food and Nutrition Board of the National Academy of Medicine, the American Dietetic Association, the Dietitians of Canada, the British ...
