Energy is required to generate a phase change of water from liquid to vapor (or solid to vapor) and to activate molecular movement. Hot air (the most common drying medium) is employed both to supply heat (by convection) and, as the carrier gas, to take away the moisture using the motion of molecules.

Food Drying - an overview | ScienceDirect Topics

Notice that corrugated duct is so restrictive it should never be used! The same is also true of flex hose that has a rough interior. Also notice that in spite of some vendor claims, these values show that PVC moves more air with less friction than even equal sized spiral ducting.
